Eubanks Model 9800

Used In These
Machines

Eubanks
9800

The Eubanks Model 9800 Machines uses two sets of "Universal" Stripping Blades to remove the insulation from two wire ends at the same time. Mechtrix blades for the Model 9800 Machines are made to precision standards from a specially selected tool steel to insure optimum performance and blade life and are produced using state-of-the-art manufacturing techniques. The state-of-the-art manufacturing techniques are combined with patented Mechtrix technology to produce perfect stripping form radii.

In addition to the "Universal" Stripping Blades, Mechtrix also offers our patented M-Series stripping form geometries for processing difficult insulations in the Model 9800 Machine. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
