Mechtrix CS-327 Series Stripping Blades

Used In These Machines

Artos
CS-327

The Artos CS-327 Machine uses both stripping blades and cut-off blades to measure, cut-to-length and then remove the insulation from the ends of a wire. Mechtrix blades for the CS-327 Machines are made to precision standards from a specially selected tool steel to insure optimum performance and blade life and are produced using state-of-the-art manufacturing techniques. The state-of-the-art manufacturing techniques are combined with patented Mechtrix technology to produce perfect stripping form radii.

In addition to the Artos OEM Radius Style Stripping Blades listed on the following page, Mechtrix also offers both our patented M-Series and additional sizes of Full Radius stripping form geometries for processing difficult insulations in the CS-327 Machine.

Please contact Mechtrix for assistance in selecting the appropriate style, size and quantity of blades for your particular application.
