The Komax Gamma 252, Gamma 253, Gamma 255 and Gamma 263 Machines use a single set of Stripping Blades to remove the insulation from the end of a wire. The Mechtrix blades for the Komax Gamma Machines are made to precision standards from a specially selected tool steel and micro-grain carbide to insure optimum performance and blade life. State-of-the-art manufacturing techniques are combined with Mechtrix patented technology to create perfect stripping form radii which produce the highest quality cutting tool possible.

In addition to the "Universal" Stripping Blades, Mechtrix also offers our patented M-Series and Full Radius stripping form geometries for processing difficult insulations in the Komax Gamma Machines. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
