Toyojamco JN01 Stripping Blades

Used In These
Machines

Toyojamco
JN01

The Toyojamco JN01 Series Machines use a single set of "Universal" Stripping Blades to remove the insulation from the end of a wire. Mechtrix blades for the Toyojamco JN01 Machines are made to precision standards from a specially selected tool steel to insure optimum performance and blade life and are produced using state-of-the-art manufacturing techniques. The state-of-the-art manufacturing techniques are combined with patented Mechtrix technology to create perfect stripping form radii which produce the highest quality cutting tool possible.

In addition to the "Universal" Stripping Blades, Mechtrix also offers both our patented M-Series and Full Radius stripping form geometries for processing difficult insulations in the JN01 Machines. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
