KM Digitech KM-104N Stripping Blades

Used In These
Machines

KM Digitech
KM-104N

The KM Digitech KM-104N Machines use "Universal" Style Stripping Blades to remove the insulation from the end of a wire. Mechtrix blades for the KM Digitech Machines are made to precision standards from a specially selected tool steel to insure optimum performance and blade life and are produced using state-of-the-art manufacturing techniques. The state-of-the-art manufacturing techniques are combined with patented Mechtrix technology to produce perfect stripping form radii.

In addition to the "Universal" Stripping Blades, Mechtrix also offers both our patented M-Series and Full Radius stripping form geometries for processing difficult insulations in the KM Digitech KM-104N Machines. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
