The KMI Machines use "Universal" Style Stripping Blades to remove the insulation from the end of a wire. Mechtrix blades for the KMI Machines are made to precision standards from a specially selected tool steel to insure optimum performance and blade life and are produced using state-of-the-art manufacturing techniques. The state-of-the-art manufacturing techniques are combined with patented Mechtrix technology to produce perfect stripping form radii.

In addition to the "Universal" Stripping Blades, Mechtrix also offers both our patented M-Series and Full Radius stripping form geometries for processing difficult insulations in the KMI Machines. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
