CR.22

The Artos MTX, STX, CR.11 and CR.22 Machines use either "Universal" or dedicated radius stripping blades to remove the insulation from the end of a wire. Mechtrix blades for the MTX, STX, CR.11 and CR.22 Machines are made to precision standards from a specially selected tool steel to insure optimum performance and blade life and are produced using state-of-the-art manufacturing techniques. The state-of-the-art manufacturing techniques are combined with patented Mechtrix technology to produce perfect stripping form radii.

In addition to the new Mechtrix MCR "Universal" Stripping Blades (Patent Pending), Mechtrix also offers both our patented M-Series and Full Radius stripping form geometries for processing difficult insulations in the MTX, STX, CR.11 and CR.22 Machines. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
