TR10/TR20/TR30  
THR20/THR30

The ShinMaywa Wire Processing Machines use a set of Stripping Blades to remove the insulation from the end of a wire. Mechtrix blades for the ShinMaywa Machines are made to precision standards from either specially selected tool steel or tungsten carbide. State-of-the-art manufacturing techniques, combined with patented Mechtrix technology, produce perfect stripping form radii that insure both optimum performance and blade life.

In addition to the "Universal" and "V-Style" Stripping Blades, Mechtrix also offers our patented M-Series and Full Radius stripping form geometries for processing difficult insulations in the Shin Maywa Machines. Please contact Mechtrix for assistance in selecting the appropriate style and size blade for your particular application.
